

Homework 2

The tweets with the ten new features were loaded to Weka, the next observations are made with regard to the statistics of each attribute.

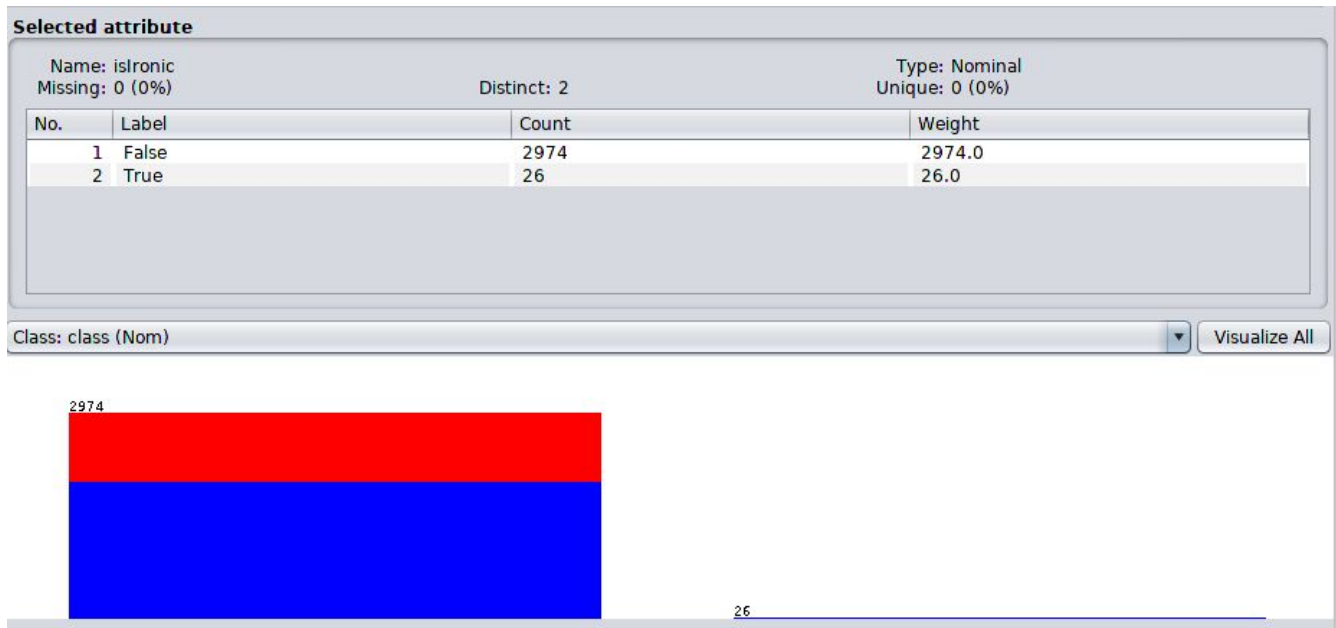

First we take a look to the five nominal features provided by Meaning Cloud, these are all nominal values that represent the sentiment of the tweet.

Polarity (score_tag)

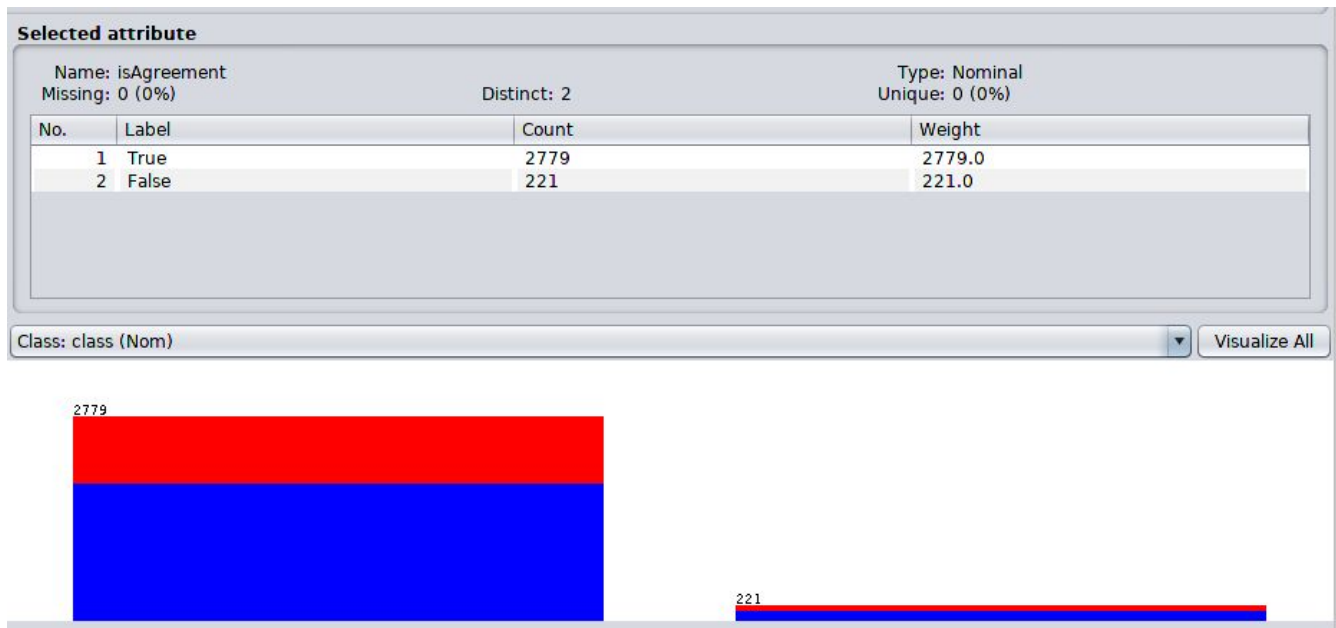

Some corrections were made with regard to the previous delivery, I restored the feature values from integer to the five values given by meaning cloud (N+, N, NEU, P, P+ and None) as they are nominal values.

isIronic

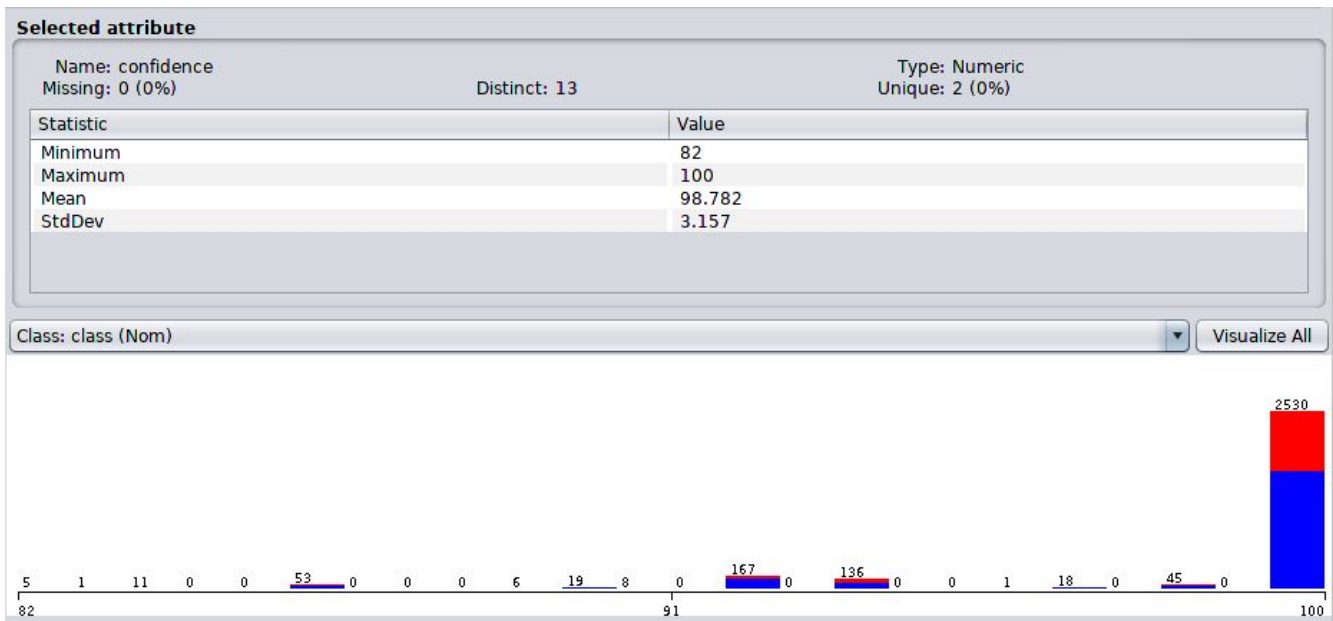

isAgreement

isSubjective

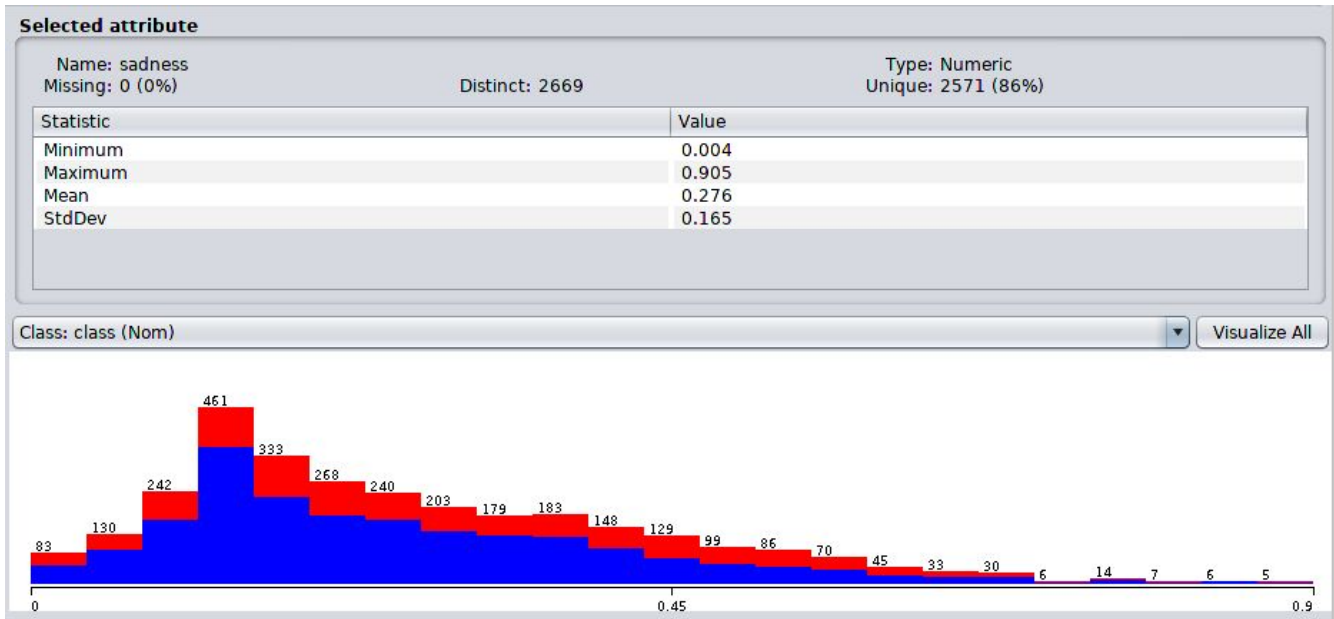

Confidence

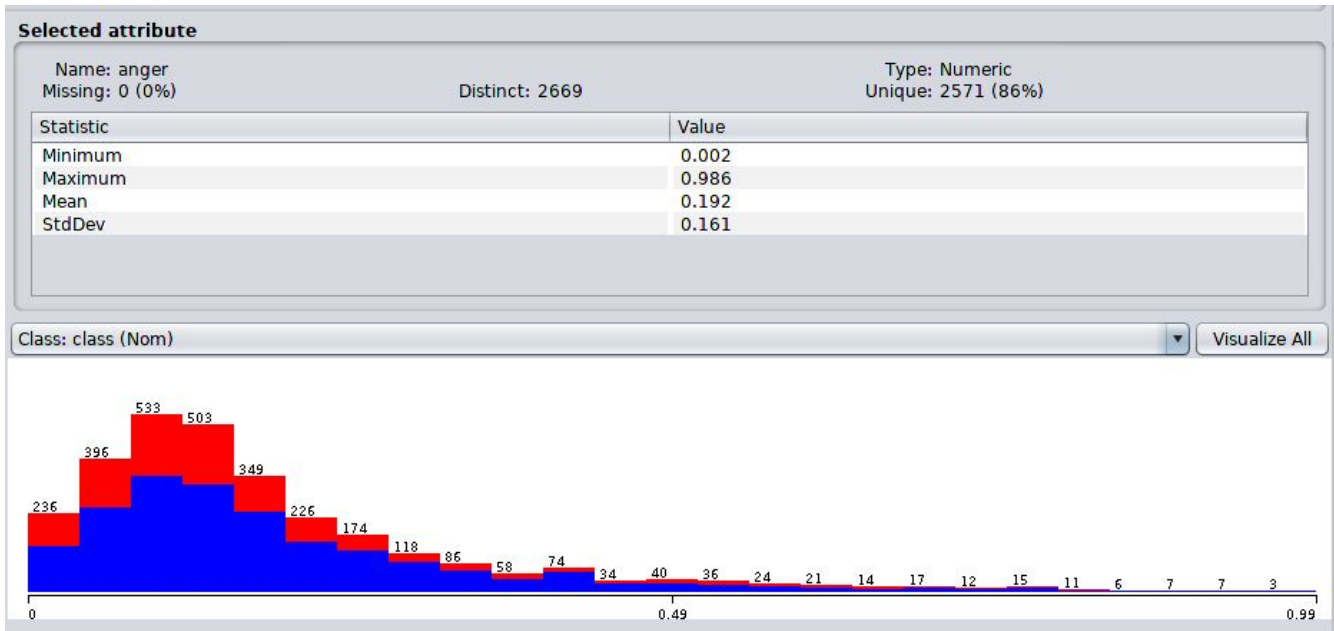

For the 5 real values provided by the emotion analysis of indicoio:

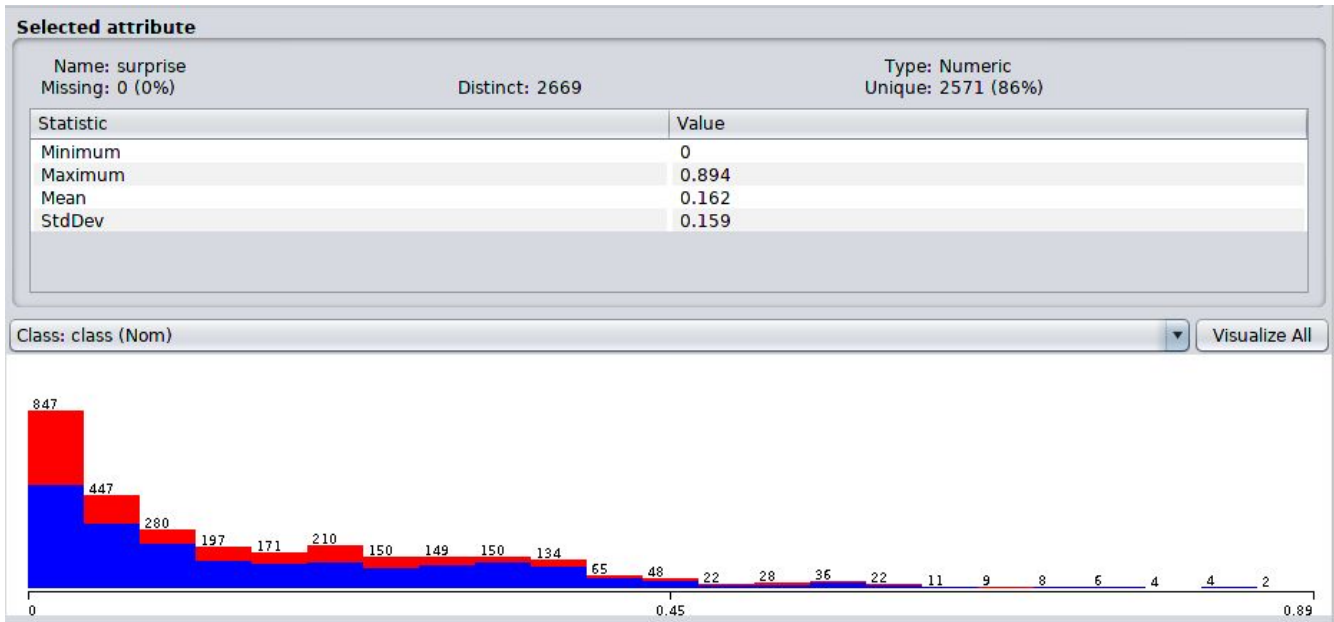

sadness

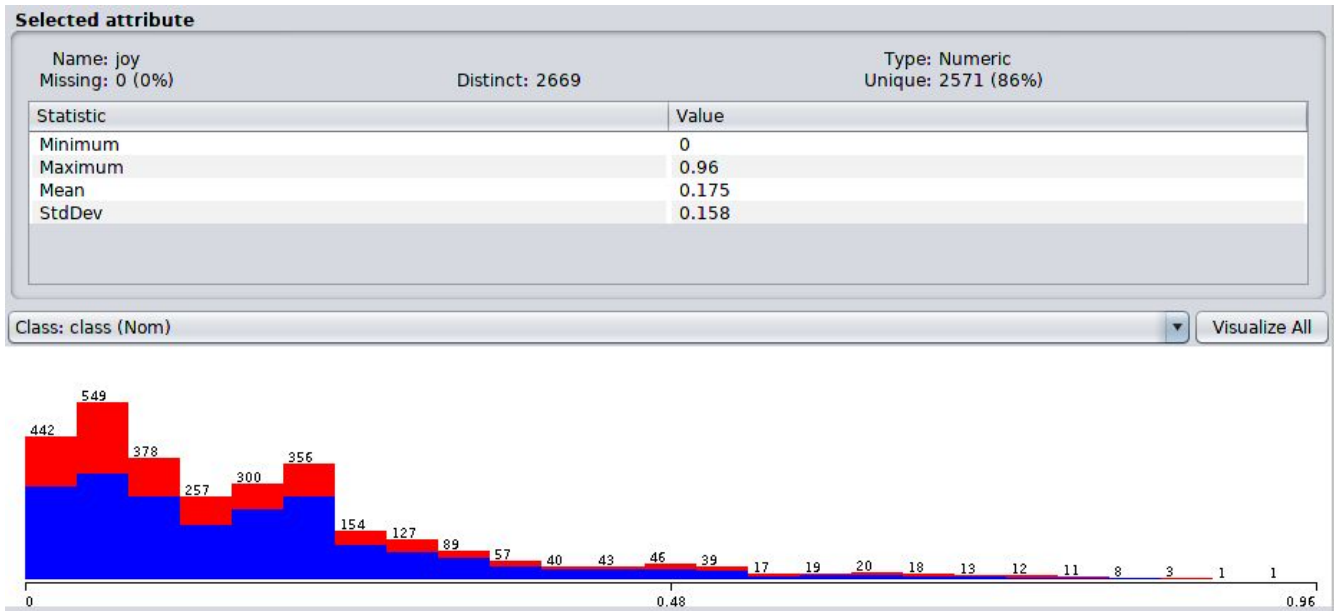

Anger

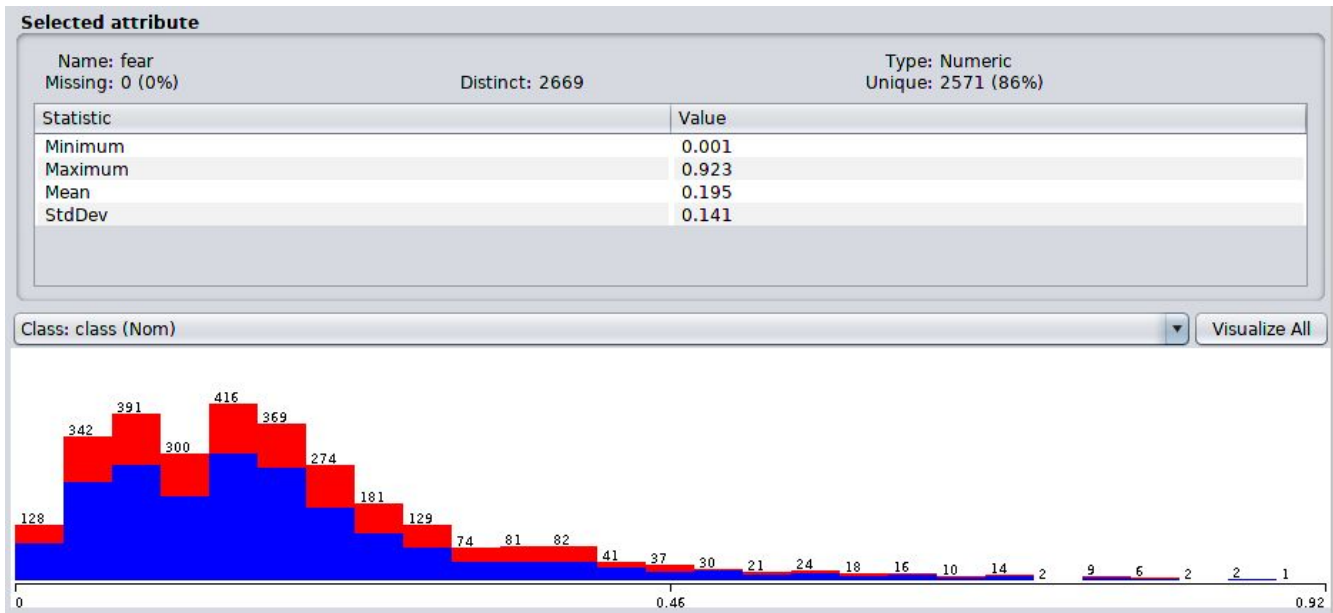

Surprise

Joy

Fear

All
